

The GEN AI Program, by the Numbers

A full read-only breakdown of the CTD generative-AI pipeline: how much AI is in the cuts, how efficiently we're generating it, and where every shot stands. Sourced entirely from the CTD Airtable — GEN AI SHOTCODES, GEN AI ASSETS and GEN AI REPORTS, plus CUTS TO NETWORK and the 08.12 day-to-day schedule. Snapshot August 14, 2026.

The one-sentence version: generative AI now fills between 29.7% and 41.1% of every measured cut — a weighted 35.9% of program runtime — we're producing it roughly three times more efficiently than when we started, and 56% of all planned shots are already cut-ready and delivered.

01

AI in the cuts

AI screen-time as a share of each cut, latest cut per episode. Runtime = the timeline position of each cut's final AI clip (broadcast master starts 01:00:00:00), so these are floors — true share is these or marginally lower.

CUT	DATE	AI CLIPS	AI SCREEN-TIME	RUNTIME	AI SHARE
101 Picture Lock (conformed)	2026-07-24	338	12:46	43:02	29.7%
102 Picture Lock	2026-08-12	471	18:57	46:06	41.1%
103 Fine Cut	2026-08-07	415	14:20	43:01	33.3%
104 Rough Cut	2026-07-27	357	17:07	44:00	38.9%

AI is a structural third-plus of the show. Across four independent cuts on four different episodes the share sits between 29.7% and 41.1%, and it does not shrink as a cut matures — 102 climbed from 32.5% at rough cut to 41.1% at picture lock, and 103 went from 27.9% at rough cut to 33.3% at fine cut. Every episode has gained AI on the way to lock, not lost it.

02

Efficiency — are we improving?

Clips generated per clip that lands in the cut. Generated = all clips delivered for that episode's stories; Used = AI placements in that cut's timeline.

EPISODE	GENERATED	USED (IN CUT)	GENERATE-TO-USE
101	1,896	338	5.61 : 1
102	1,163	471	2.47 : 1
103	1,050	415	2.53 : 1
104	624	357	1.75 : 1

Yes — sharply, then it settled. 101 needed 5.61 generations per clip that made the cut. 102, 103 and 104 land at 2.47, 2.53 and 1.75 — roughly a third of 101's waste for more AI on screen. That's the locked prompt library, the reference-frame workflow and re-spin discipline compounding, and the curve has now flattened: ~2:1 looks like the floor with the current toolset.

Two caveats for honesty: (1) 101 has been in production longest and carries the most one-time experimental and re-spun generations — some of its 5.61:1 was tuition later episodes skip. (2) "In cut" counts timeline placements; a clip used twice counts twice, so true distinct-clip efficiency is marginally leaner. The trend is unambiguous either way.

03

Production pipeline

Every planned shotcode (GEN AI SHOTCODES) and every generated file (GEN AI ASSETS), by status.

STAGE	COUNT	SHARE	
Sent to Cream	895	56%	
First request	145	9%	
In progress	27	2%	
Vetting	16	1%	
Not started	416	26%	
Paused	52	3%	
Cancelled	46	3%	

Total planned shotcodes **1,597** across all episodes.

GENERATION	COUNT	
Total clips generated (all files)	5,032	3.2 files per planned shotcode
Ingested at Cream	4,974	99% of everything generated
Re-spin clips (all-time)	1,622	32% of all generation is rework
Re-spins open right now	123	requested or in progress

Reading the funnel: 895 of 1,597 planned shotcodes (56%) are cut-ready and sent to Cream. The live queue is 188 — 145 just requested, 27 being generated now and 16 in vetting. The 416 not started are almost entirely back-half episodes: 106 (110), 108 (132), 107 (63) and 105 (66).

04

Re-spins

Clips sent back for changes, counted from the re-spin link on each asset. Measured against shots *used in the cut*, not total generated files — a generated-file denominator just rewards over-generation.

EPISODE	RE-SPIN CLIPS	SHOTS USED (IN CUT)	RE-SPINS PER USED SHOT
101	812	338	2.4
102	501	471	1.06
103	200	415	0.48

EPISODE	RE-SPIN CLIPS	SHOTS USED (IN CUT)	RE-SPINS PER USED SHOT
104	109	357	0.31
101-104	1,622	1,581	1.03

Re-spin load by story

CODE	STORY	EP	RE-SPINS
FDN	Fukushima Nuclear Disaster	101	295
447	Air France Flight 447	101	175
OTI	OceanGate Titan Implosion	102	132
MSH	Mount St. Helens Eruption	101	112
TAD	Tenerife Airport Disaster	102	112
BMF	Boston Molasses Flood	102	99
TXC	Texas City Disaster	101	93
SDS	Sampoong Department Store Collapse	103	88
LMR	Lac-Megantic Rail Disaster	103	81
HIN	Hindenburg	101	77
PAO	Piper Alpha Oil Rig Disaster	102	69
CHF	China Floods	101	60
TSF	Triangle Shirtwaist Factory	104	45
LPE	Loma Prieta Earthquake	102	43

101 was the learning episode and it shows: 2.4 re-spin passes for every shot that made the cut. 102 halved that to 1.06, 103 is at 0.48 and 104 at 0.31 — an order-of-magnitude improvement in rework across four episodes. Fukushima (295) and Air France 447 (175) remain the heaviest single stories: the effects-dense reactor and mid-air sequences, where getting the physics right takes the most passes.

Everything measured, lined up per episode. AI-in-cut figures exist only where a cut has been assembled.

EP	CUT STAGE	AI SHARE	GENERATED	GEN:USE	RE-SPINS	R/USED	STATUS
101	Picture Lock (conformed)	29.7%	1,896	5.61:1	812	2.4	Locked – AI delivered
102	Picture Lock	41.1%	1,163	2.47:1	501	1.06	Locked – AI delivered
103	Fine Cut	33.3%	1,050	2.53:1	200	0.48	Behind – active backlog
104	Rough Cut	38.9%	624	1.75:1	109	0.31	Behind – active backlog
105	No cut assembled yet — 216 shotcodes planned, 74 sent, 127 to do, 269 clips generated. 1st requests Jul 13–17 · 2nd delivery due Aug 14.						2nd delivery due today
106	No cut assembled yet — 110 shotcodes planned, 0 sent, 110 to do, 0 clips generated. 1st requests Jul 30–Aug 7 · 2nd delivery due Sep 3.						1st requests out
107	No cut assembled yet — 64 shotcodes planned, 1 sent, 63 to do, 6 clips generated. 1st requests Aug 10–13 · 2nd delivery due Sep 17.						1st requests out
108	No cut assembled yet — 132 shotcodes planned, 0 sent, 132 to do, 0 clips generated. 1st requests Aug 17–21 · 2nd delivery due Sep 24.						Requests start Aug 17
n/a	Not linked to an episode in the base — 37 shotcodes (9 sent, 28 not started) and 24 generated clips. Counted in the totals above, excluded from every per-episode figure.						Unassigned

Where the risk is: 105 is the live one — 61 shots in active production and 66 not started against a 2nd delivery that was due Aug 14. 106, 107 and 108 have their first requests out (Jul 30–Aug 7, Aug 10–13 and Aug 17–21 respectively) but nothing generated yet — 306 shotcodes of unstarted work with deliveries stacked between Sep 3 and Sep 24.

Every cut measured

All 11 assembled sequences in GEN AI REPORTS, outdated and duplicate rows excluded. This is the raw ledger behind sections 1 and 2.

SEQUENCE	DATE	PLACEMENTS	AI TIME	RUNTIME	SHARE

07

Method & sources

AI share: sum of AI clip durations per cut (GEN AI REPORTS), excluding rows flagged outdated or duplicate, over the runtime taken from that cut's final Seq-Out timecode at 24 fps.

Efficiency: total delivered files per episode (GEN AI ASSETS, by episode lookup) divided by AI placements in that episode's latest cut (GEN AI REPORTS).

Pipeline: live status counts from GEN AI SHOTCODES. **Re-spins:** assets whose "Re-spin For" link is populated — every re-generated file, which is a broader and more reliable count than the older note-text method used in the July report.

Calendar & deadlines: the 08.12 day-to-day schedule, cross-checked against SHOOT DATES and CUTS TO NETWORK in the base.

Reconciling the totals: 37 shotcodes and 24 generated clips carry no episode link in Airtable. They are included in every series-wide total on this site (1,597 shotcodes, 5,032 clips) and excluded from every per-episode figure, so the per-episode columns sum to 1,560 and 5,008 respectively. Both figures are shown as an "unassigned" row wherever a table breaks down by episode. Fixing the links in the base makes the two views identical.

Scope: 3,892 clip placements, 5,032 generated files, 1,597 planned shotcodes, 34 network cuts and 21 shoot days read. Runtime and placements-as-clips are floors and are flagged where they appear; both bias the same direction and don't change any conclusion.
